

ALUMINIUM

Material & Care

MATERIAL

- Aluminium with polyester coating.
- 100% recyclable.
- The material used fulfils all the requirements of the European REACH regulation.

PROPERTIES

- The rust-free light metal is ideal for outdoor use.
- Outdoor furniture made of aluminium is easy to handle due to its low weight.
- High wall thicknesses of the aluminium tubes (min. 1.5 mm) ensure enormous stability.
- Elegant and easy-care surface finish thanks to a high-quality polyester coating.
- Aluminium outdoor furniture is durable and resistant to weathering.
- High UV stability. Colour fastness of the surface tested for 3 years in Central Europe.

CARE

We recommend:

- Remove any dirt from the surface immediately to avoid staining or damage to the surface.
- Remove light soiling with a soft cloth or sponge, a soft brush, lukewarm water and a pH-neutral cleaning agent or mild soapy water.
- Simply rinse off any cleaning residue with clear water and rub dry with a cloth.
- Soften stubborn or dried-on dirt with a light, lukewarm soapy solution and wipe off carefully.
- To avoid staining, do not clean the furniture in direct sunlight. The surface temperature should not exceed 25°C during cleaning.

Never use for cleaning:

- Cleaners containing chlorine, acids or solvents.
- Scratching or abrasive agents.
- Hard brushes or steel wool.
- Products with aggressive chemical additives.
- Strongly acidic or alkaline solvents.
- High-pressure cleaners.

These can damage the surface.

Notes:

- Avoid dry cleaning, as this can lead to scratches on the coated surface.
- Do not place decorations permanently on the furniture. They can cause stains or discolouration.
- Grease and oil adhere easily to the smooth surface. Sun oil/milk can cause stains. Therefore, remove such stains immediately.
- Drain any water that has entered the aluminium tubes through the screw holes by removing the foot caps. For this purpose, place the furniture on an insensitive surface to prevent stains from forming on the floor. This is particularly recommendable before storing the furniture in winter or before periods of frost if the furniture is left outside over the winter.

ALUMINIUM

Material & Care

-
- For minor coating damage, we recommend commercially available touch-up pencils, whereby the instructions of the respective manufacturer must be observed.

STORAGE

- Even though SIEGER furniture is resistant to the effects of the weather, winter storage indoors or in dry, sheltered areas keeps the furniture looking good for longer and at the same time protects it from soiling.

We recommend:

- Store in a dry place.
- Store frost-free, but not overheated.
- Protect from UV radiation during the winter.
- Avoid large temperature fluctuations.
- Ensure good ventilation.
- If winter storage indoors or in a dry, sheltered place is not possible, we recommend protecting the furniture with commercially available covers. To allow air to circulate and prevent waterlogging or condensation, these should not rest on the ground or on the product. Plastic wedges or similar spacers are suitable for this purpose. Alternatively, remove the protective covers regularly for short periods. Water should be able to run off easily and not remain on the protective cover. Always remove snow from the cover. Failure to do so can lead to mould or mildew stains on the furniture.

NOTES

- To protect the frames, the furniture is fitted with plastic foot caps or floor glides. Like all plastics, these are subject to abrasion, which can vary depending on the structure and colour of the floor and may leave streaks. This does not constitute a product defect.
