

# OUTDOOR FABRIC sunproof®

## Material & Care

## MATERIAL

- 100% spun-dyed or through-dyed olefin (synthetic fibre based on polyethylene or polypropylene).
- 100% recyclable.

## PROPERTIES

- High-quality outdoor fabric designed for outdoor use.
- Breathable and pleasant fabric feel.
- High UV resistance.
- Excellent colour fastness according to BS EN ISO 105-B04 (level 7/8).
- Quick-drying and abrasion-resistant.
- Antibacterial and mould resistant.
- Dirt and water repellent.
- Easy-care and machine washable up to max. 40° C.
- OEKO-TEX® STANDARD 100 certified.

## CARE

### We recommend:

- Wipe the fabric regularly with a slightly damp cloth so that you can enjoy your product for a long time.
- Treat soiling immediately and remove it carefully. Wipe off liquids with a cloth. Soften dried, sticky or encrusted dirt slightly beforehand with warm water or a light soapy solution and treat it with a soft brush. Rinse well with clean water.
- Removable covers can be washed at a maximum of 40°C with a gentle wash programme. Pull the covers onto the foam while they are still damp and then allow them to air dry in the shade. Do not iron or tumble dry the covers.
- Do not use a steam cleaner for cleaning.

## STORAGE

- If you want to enjoy your cushions for a long time, it is advisable not to expose them to unnecessary soiling and to store them with care, and not just in winter. Even in summer, rain, sun and dirt are the natural enemies of your upholstery.
- We therefore recommend storing the cushions in a protected place when not in use.
- Depending on the size and type of cushions, special cushion boxes are suitable for this purpose. The type of box depends largely on the chosen location.
- Entire sets of furniture can be covered with appropriate protective covers. However, good ventilation to prevent waterlogging is essential. The cushions, if they remain under the protective cover, should be completely dry. See also our SIEGER protective covers.
- Overwinter the cushions in a cleaned and dried condition and protect them from dirt in dry rooms. Avoid storage in a damp or warm and humid environment. Ensure that the cushions are well ventilated. This will prevent the formation of mould stains or mildew.
